

## USA Coverage for Scanner Vehicle Communication Software Australia / New Zealand 17.2 Release

NOTE: This software has been developed and proven in the USA on USA sold vehicles – but may not support some Australian sold vehicles (or systems).

### INDEX

#### US DOMESTIC

##### **Chrysler** 1983-2016

This incorporates Chrysler, Dodge, Eagle, Jeep, Plymouth and RAM models.

(Although software covers various from 1983, these coverage sheets only display detailed information from 1996-2016.)

##### **Ford** 1981-2016

This incorporates Ford, Lincoln and Mercury models.

(Although software covers various from 1981, these coverage sheets only display detailed information from 1996-2016.)

##### **GM** 1980 - 2016

This incorporates Buick, Cadillac, Chevrolet, GMC, Hummer, Oldsmobile, Pontiac, Saturn, Spartan and Workhorse models.

(Although software covers various from 1980, these coverage sheets only display detailed information from 1992-2016.)

#### US ASIAN

##### **US Asian** 1983 - 2016

This incorporates Acura, Chrysler Imports, Geo, Honda, Hyundai, Infiniti, Isuzu, Kia, Lexus, Mazda, Mitsubishi, Nissan, Scion, Subaru and Toyota models.

(Although software covers various from 1983, these coverage sheets only display detailed information from 1992-2016.)

## Domestic/Asian

- **Ford Transmission Functions:** New Transmission Characterization and Solenoid functions to 2011-2016 6.7L Diesels with automatic transmission
- **Enhanced Ford EVAP Testing:** New EVAP Small Leak test to vehicles
- **GM Diesel Resets:** Catalyst 1 Reset, DPF Engine Data Shutdown Reset, Exhaust After treatment Injector Reset, NOX Sensor #1 and #2 Reset on vehicles equipped with 6.6L Diesel
- **GM Hybrid Coolant Bleed:** HVCM Control Module Hybrid EV Battery Pack Coolant Pump Bleed Procedure on 2011 and newer Volt
- **Honda Enhanced Safety Systems:** Dynamic and Static camera aiming to all vehicles with Forward Collision Warning and Lane Departure Warning systems
- **Mazda EVAP Tests:** Added EVAP testing to 2010 and newer UDS vehicles
- **Toyota EVAP test enhancements:** Added ability to graph data during the 11-step Automated EVAP test on 2007 and newer vehicles

## New Body Electrical

**Guided Component Tests > COMPONENT INFORMATION**

 **Back**
 **Exit**

**Body Electrical - EXTERIOR LIGHTING - HEADLIGHT SWITCH - COMPONENT INFORMATION**

### Operation

**Principles of Operation**

The headlamp switch is integrated into the Front Lighting Control Module (FLM). The FLM monitors the headlamp switch position and sends a message over the High Speed Controller Area Network (HS-CAN) to the Body Control Module (BCM) to indicate the headlamp switch status (position or a fault with the headlamp switch).

If the BCM detects a fault from the headlamp switch or loses communication with the FLM, the BCM turns the parking lamps and headlamps on and keeps them on until the battery saver feature times out.

If either situation occurs, the BCM cannot be ruled immediately as being at fault. This is normal behavior of the BCM design as a fault has been detected with the inputs from the headlamp switch.

When the BCM receives input requesting the headlamps on, it supplies voltage to the headlamp bulbs (halogen headlamps) or the ballasts (High Intensity Discharge (HID)) within each headlamp assembly.

**Normal Operation**

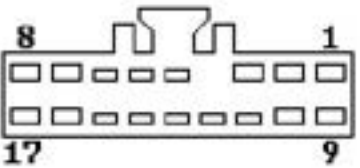

When the Body Control Module (BCM) receives a message indicating a request for the headlamps, the BCM provides voltage through the headlamp output circuits to the low beams.

On vehicles equipped with halogen headlamps, voltage is sent directly to the headlamp bulbs.

On vehicles with High Intensity Discharge (HID) headlamps, voltage is sent to the ballasts. The ballasts also receive voltage at all times from the Battery Junction Box (BJB). The ballasts provide high voltage to the HID bulbs when voltage from the BCM is detected.

### Connector

View: Harness Side, Backprobing Front Lighting Control Module (FLM) 16 Pin Connector (C205)

Pin Assignment	Wire Color
1=Headlamp Variable Resistor Leveling	Violet-Green
3=Dimmer Switch Illumination Dim Down	Brown-Violet
4=Ground Instrument Pack Structure	Black-Blue
5=Ground Instrument Pack Structure	Black-Blue
6=Dimmer Switch Illumination Dim Up	Yellow-Violet
9=Fuse or Circuit Breaker Protected	Yellow-Violet
10=Headlamp Switch Off	White-Violet
11=Switch Park Lights	Gray
12=Headlamp Switch On	Yellow-Blue
13=Switch Autolamp on	Violet-Green
14=Front Fog Lamps Switch	Gray-Violet
15=Instrument Pack Switch Illumination Dim	Violet-Gray

## New Body Electrical

 Back  Exit

is detected.

The BCM also provides an overload protection of the low beam output circuits. When an excessive current draw is detected, the BCM disables the affected low beam circuit driver.

### High Beam and Flash-to-Pass

The Steering Column Control Module (SCCM) monitors the multifunction switch for a flash-to-pass or high beam request. When the multifunction switch is in the FLASH-TO-PASS or HIGH BEAM position, the SCCM sends a message to the BCM to indicate the request.

When the low beams are on and the BCM receives a request for high beams (or a flash-to-pass request), the headlamps remain powered and a shutter within each headlamp is activated. This changes the headlamp beam pattern to illuminate a greater distance.

When the low beams are off and the flash-to-pass is requested, the headlamps and the shutters are activated for approximately 0.5 second. When the low beams are on and the flash-to-pass is requested, the shutters within the headlamps are activated as long as the multifunction switch is held in the FLASH-TO-PASS position.

### Field-Effect Transistor (FET) Protection

The Field-Effect Transistor (FET) protection strategy prevents module damage in the event of excessive current flow.

The BCM FET protected output circuits for the headlamp system are both low and high beam output circuits.

### Adaptive Headlighting

The Headlamp Control Module (HCM) receives information from the communication network such as vehicle speed, steering wheel angle and headlamp on/off status.

#### Tech Notes

**Tech Note:**  
Due to varying wattage ratings and resulting current draw, certain aftermarket headlamp bulbs may cause the LCM to shut down the short circuit protection, resulting in the low beams becoming inoperative. Verify that the headlamp bulbs meet Ford specifications.

**Tech Note:**  
Due to varying wattage ratings, aftermarket headlamp bulbs may cause the headlamp circuit to operate at a higher Amperage. Resulting in excessive heat, blown fuses, inoperable headlamps and possible component meltdown. Verify that the headlamp bulbs meet the vehicle manufacturer specifications before installation.

## New GM Diesel Tests

 Guided Component Tests > COMPONENT INFORMATION

 Back  Exit

---

**FUEL INJECTION - WATER-IN-FUEL SENSOR - COMPONENT INFORMATION**

**Operation**

Water in fuel sensor has an indicator control circuit and a low reference circuit. The engine control module (ECM) monitors the voltage to the water in fuel sensor. When water is present the ECM detects low voltage on the signal circuit and sends a serial data message to the instrument panel cluster to display the WATER IN FUEL SERVICE REQUIRED message.

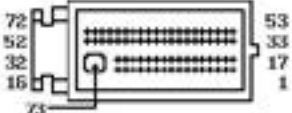

**Connector**

View: Harness Side, Backprobing Connector

Pin Assignment	Wire Color
A=Water In Fuel Sensor Low Reference	Blue
B=Water In Fuel Sensor Signal	Blue-Yellow

View: Harness Side Backprobing ECM Connector X3 (Gray)

Pin Assignment	Wire Color
2=Water In Fuel Sensor Signal	Blue-Yellow
17=Water In Fuel Sensor Low Reference	Blue

**Location**

Best test Location:  
At the component connector or ECM.

Component Location:
