# WHAT'S NEW IN VCS

- THE HIGHLIGHTS

## 2016 MODEL YEAR UPDATE

Citroen, Ford, Jaguar, Lexus, Mercedes, Peugeot and Porsche

### NEW BMW

- Diesel adjust idle speed – adjust idle speed after replacing timing chain
- Replace ABS ECU and transfer coding to replacement ABS module
- Plus all of these new functions – air conditioning flap motor calibration, diesel adjust glow element, diesel adjust EGR, diesel provide injector quantity value, slide/tilt sunroof (SHD)

### NEW Ford

- Four new models added to our already extensive coverage – New Ranger – 2.2L diesel and 3.2L diesel, Edge – 2.0L diesel, new KA+ – 1.2L petrol, new Focus RS – 2.3L petrol
- 275 Functional tests available for Ford

### NEW Jaguar

- Two new models added, the XF (260) & F-Pace (X760)
- 594 Functional tests available for Jaguar

### NEW Land Rover

- Rear differential control module added for the Evoque (L538) (2012-2013) enabling you to complete an all wheel drive flush

### NEW Opel/Vauxhall

- Electric power steering coverage extended for the Vectra C and Corsa D including HS Can Bus configuration, calibrate steering angle sensor, program power steering characteristic, program VIN number

WHAT'S NEW IN CTM

MORE

NEW TO AUTO ID/CLEAR ALL/CODE SCAN

# WHAT'S NEW IN VCS

- New parking brake module added for the Cascada – codes, data and actuator tests

## **NEW** Peugeot/Citroen

- Four new models added – Citroen Dispatch 3 (KO), Citroen Space Tourer, Peugeot Expert (KO), Peugeot Traveller – with extensive systems and function coverage
- ABS – Electric parking brake resets added to the Citroen C4 / C4 Picasso B78, Peugeot 308 T9 – carry over EPB & Brake resets on the ABS

## **NEW** Renault

- Steering column replace function added for the Modus 2010> –Electronic Power Steering including steering motor replacement function, re-program – immobilizer function, assign new or used controller to vehicle

- Corner lights added for the Clio III 2011> & Modus 2011> – codes, data and actuator tests/special functions/light calibration, re-program new ECU & write new VIN

NEW TO AUTO ID/CLEAR ALL/CODE SCAN

# WHAT'S NEW IN CTM

- NEW** • **New manufacturer added – Porsche!**
  - All major models and engines covered
  - **Including ABS menus**
  - ABS control module information inclusive of tests
  - Speed sensor & Brake pedal component information and tests

EXAMPLE ▶

## **NEW** Plus....

- Updates have been added to the Air-conditioning Diagnostics Class
- Gauges (interpreting readings) mechanical components and new components Example: Clutchless Compressors etc...

## **NEW** • **27 makes now covered**

- NEW** • **3 NEW Technology Classes added!**
  - Electronic Throttle control Class.
    - Covering H Bridge Control [reversing Polarity]
  - Basic Electronic Components Class
    - Focus on Transistors / Diodes. Theory & Operation, Testing
  - Engine Management Control Systems Class
    - Inputs / Outputs / Communication

EXAMPLE ▶

EXAMPLE ▶

EXAMPLE ▶

## **NEW** Plus....

- 3 New case studies added:
  - Audi A4 Hot Start Issue
  - Opel / Vauxhall Defective ignition system
  - BMW E 90 Engine Misfire

Engine - Diesel Electronic Throttle Control Sensor - Component Information

Operation	Connector
<p>Diesel Electronic Throttle Control Sensor</p> <p>Description :</p> <p>It contains a variable resistor or potentiometer.</p> <p>Operation :</p> <p>Movement of the throttle reduces pressure in the engine inlet. Exhaust gas is then drawn into the inlet of the engine and EGR or exhaust gas recirculation takes place.</p> <p>The throttle is also used to stop the engine smoothly when it is turned off.</p> <p>The sensor changes movement of the actuator into an electrical signal. The ECM uses this signal to determine the position of the throttle actuator.</p>	<p>Connector view :</p> <p>Harness connector, cable side:</p>  <p>Pin assignment :</p> <ul style="list-style-type: none"><li>1 : 5V supply.</li><li>2 : Signal.</li><li>3 : Ground.</li></ul>

# HOW TO CTM CLASSES

Guided Component Test Extras 14:01

How To - 10 Minute Basic Electronic Component Class

1) Anode.  
2) P-type material.  
3) N-type material.  
4) Depletion layer.  
5) Cathode.

A) Forward Bias.

The image shows a software interface for a guided component test. At the top, there's a title bar with 'Guided Component Test Extras' and a clock showing '14:01'. Below the title bar is a navigation bar with icons for back, home, and settings. The main content area displays the title 'How To - 10 Minute Basic Electronic Component Class'. It features a circuit symbol for a diode with terminals labeled '1' and '5'. Below the symbol is a list of five items: 1) Anode, 2) P-type material, 3) N-type material, 4) Depletion layer, and 5) Cathode. Further down, there are two diagrams labeled 'A' and 'B' showing the internal structure of a diode under forward bias. Diagram 'A' shows the depletion layer narrowing, and diagram 'B' shows it widening. The interface also includes a vertical sidebar on the right with navigation arrows.

The image above is a demonstration of the voltage charge/discharge time of a capacitor.

**Transistors:**

A transistor is used as an electronic switch or as a voltage amplifier. Two transistors can be connected in series to create a component called a Darlington amplifier. This is the method used to amplify the current flow through an ignition coil primary winding. Transistors can be used in modern sensors to pull down signal voltage from a control module to a ground potential.

A transistor is a component with three electrical connections:

- Base
- Collector
- Emitter

A transistor is "switched" on by a comparatively smaller current, once the circuit is switched on a larger current flow can be conducted through the transistor.

Both NPN and PNP are bipolar junction transistors, which are current controlled electronic switches, a larger current amplification can take place. Both NPN and PNP transistors are controlled by the base circuit, however their operation is different. Below is a table which outlines the difference between both types of transistor.

Transistor type	Switch on transistor	Switch off transistor	High current flow
NPN	Apply current to base circuit.	Switch off current to base circuit.	Current flow from the collector to the emitter.
PNP	Provide a ground for the base circuit.	Provide current to base circuit.	Current flow from the emitter to the collector.

## 10 Minute Electronic Control Module Class

Electronic control module configuration for Controller Area Network (CAN) compliant vehicles.

Modern vehicles use data from the same sensor for functionality of many sub-systems. This is an advantage of CAN bus communication networks. A sensor is connected to a module in the conventional way but once the module processes the signal a message is created which can be used by other modules on the network.

The diagram below shows an oxides of Nitrogen sensor (NOx). Due to the sensitivity of the electrical signal from the sensor a (NOx) control module is fitted close to the sensor. The wiring between the component and the module is very short, for accuracy and reduced interference. Once the signal is processed by the NOx control module, the data can be shared with other modules on the network.

1) NOx control module.  
2) NOx sensor.  
3) CAN bus wires (CAN High and CAN Low).  
4) Engine control module.

Guided Component Test Extras 14:07

How To - Vehicle Related Diagnostic Case Studies - Audi A4 - Difficulty During Hot Start Condition

The magnetic resistance of the sensor is altered when a tooth is in close proximity to the sensor. This results in a transistor being switched on which connects the 5 volt signal reference to ground.

1) Engine control module.  
2) Sensor supply, 5 volts with ignition switched on.  
3) Sensor signal wire.  
4) Sensor ground wire.  
5) Camshaft position sensor.

Yellow trace : Camshaft position sensor signal.  
Green trace : Camshaft position sensor ground circuit.  
Blue trace : Camshaft position sensor 5 volt supply.  
Red trace : Crankshaft position sensor signal.

As the issue with this vehicle was only evident when the engine was up to operating temperature and a quick re-start was attempted the vehicle was allowed to warm-up. After a number of engine shutdown and engine crank attempts the vehicle finally failed to start. The following waveform was captured when this condition occurred:

No Active Vehicle

Guided Component Test Extras 14:07

How To - Vehicle Related Diagnostic Case Studies - BMW 3 Series - Engine Misfire And MIL Illuminated

Below is a diagram illustrating the operation of the ignition coil fitted to this particular vehicle:

The purpose of the AAS diode is to eliminate "switch on" sparks in the secondary winding when current begins to flow through the primary winding. These diodes are only fitted to direct ignition coils and are not required for wasted spark coils.

The oscilloscope was connected to the ECM ground control circuit pin on the ignition coil block connector to monitor ignition coil primary voltage. The waveform displayed from the primary winding has a direct relationship to the activity taking place in the secondary circuit, any abnormalities can be observed.

# HOW TO CTM CLASSES

Guided Component Test Extras 14:04

How To - 20 Minute Electronic Throttle Control Class

Vehicles fitted electronic control can precisely control idle speed and also use additional processes such as closing the throttle valve slightly under cranking to improve engine start-up. This is controlled by changing the electrical polarity of the throttle motor. The image below shows a basic electronic throttle control system:

1) Accelerator pedal position sensor.  
2) Throttle position motor sensor.  
3) Throttle body assembly.  
4) Throttle control motor.  
5) Engine control module.

# HOW TO CTM CLASSES

Guided Component Tests > 20 Minute Electronic Throttle Control Class

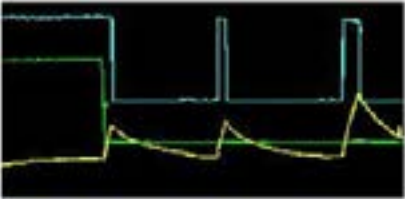

Back Configure Favorites Full List Exit

6) H-Bridge circuit.  
7) Pulse width modulated control.

In this simplified example, an operational amplifier voltage comparator uses inputs from both the desired throttle position and actual throttle position. The output ( $V_o$ ) from the comparator is the voltage difference between both signal voltages applied. This output voltage is used to control a PID (proportional, integral, derivative) driver which then outputs a PWM (pulse width modulated) control to the H drive circuit.

Current flow and voltage waveform analysis.

Below is an oscilloscope waveform captured from a vehicle, the yellow trace is the current flow through the motor and both the green and blue traces are the motor voltage control wires with a hard ground as the reference for the oscilloscope.

As can be observed from the above waveform when the voltage on both wires is equal there is no current flow through the motor. Then one wire is given a ground (green trace) and the other with is controlled with a PWM command. The more positive the PWM, the greater the current flow will be.

- TV tuner system added for the Panamera, Macan, Cayenne, Boxster/Cayman 2015> - codes, data, functional tests and relearns
- Sports exhaust system added for the Macan 2015> - codes
- External amplifier system added for the Panamera, Macan, Cayenne, Boxster/Cayman 2005> - codes, data, functional tests and relearns
- Navigation added for the Cayenne, Boxster/Cayman 2005> - codes, data, fts, relearns
- Sound system added for the Macan 2005> - codes

PORSCHE APPLICATIONS DATA

Return to home

- 2016 model year update
- 4 new models added with comprehensive system coverage
  - Citroen Dispatch 3 (KO)
  - Citroen Space Tourer
  - Peugeot Expert (KO)
  - Peugeot Traveller
- Suspension and variable damping ECU added for the Citroen C6
- Accessories belt replacement added for the Peugeot 508 Hybrid
- Reset counters for hybrid engine
- 6 new BSI systems added for the Citroen DS3 & Dispatch 3 (KO), Peugeot 308 (T9) & Expert 3 (KO)
  - Front fog lights install uninstall
  - Alarm install uninstall
  - Phone kit install uninstall
  - Trailer hitch unit install uninstall
  - Parking aid install uninstall

Return to highlights 

Return to home 

- 31 new engine codes added
- Added new variant for the brake electronics
- Added new variant for the central electronic unit
- Added new variant for the sound system
- Added new variant (19) diagnostic gateway
- Added new variant information electronics
- Added new variant for the airbag
- Configuration function added
- Airbag index coding function
- Special functions:
  - Basic setting seat occupied recognition
  - Replace front left belt tensioner
  - Replace front right belt tensioner
- Added new variant for the steering wheel
